

Day 3: API Integration and Data Migration of Template: 1

This Documentations outlines the work completed on day 3 of the template 1 Marketplace Hackathon. It Covers Custom Migration, Data Integration from Sanity and Schema Creation. Each Section is tailored best on the provided code images, with a detailed explanation of their functionality.

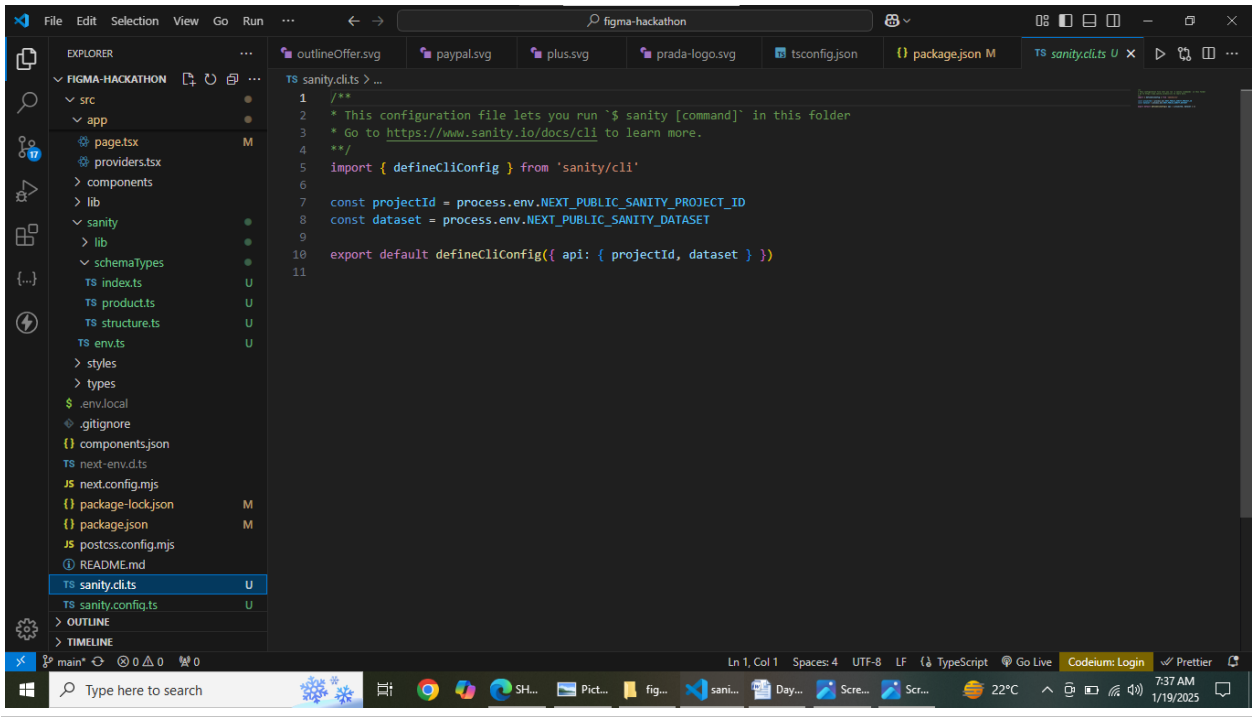

The schema defines the structure of the template 1 content in the Sanity CMS. Here’s an explanation of its components:

Import Schema:

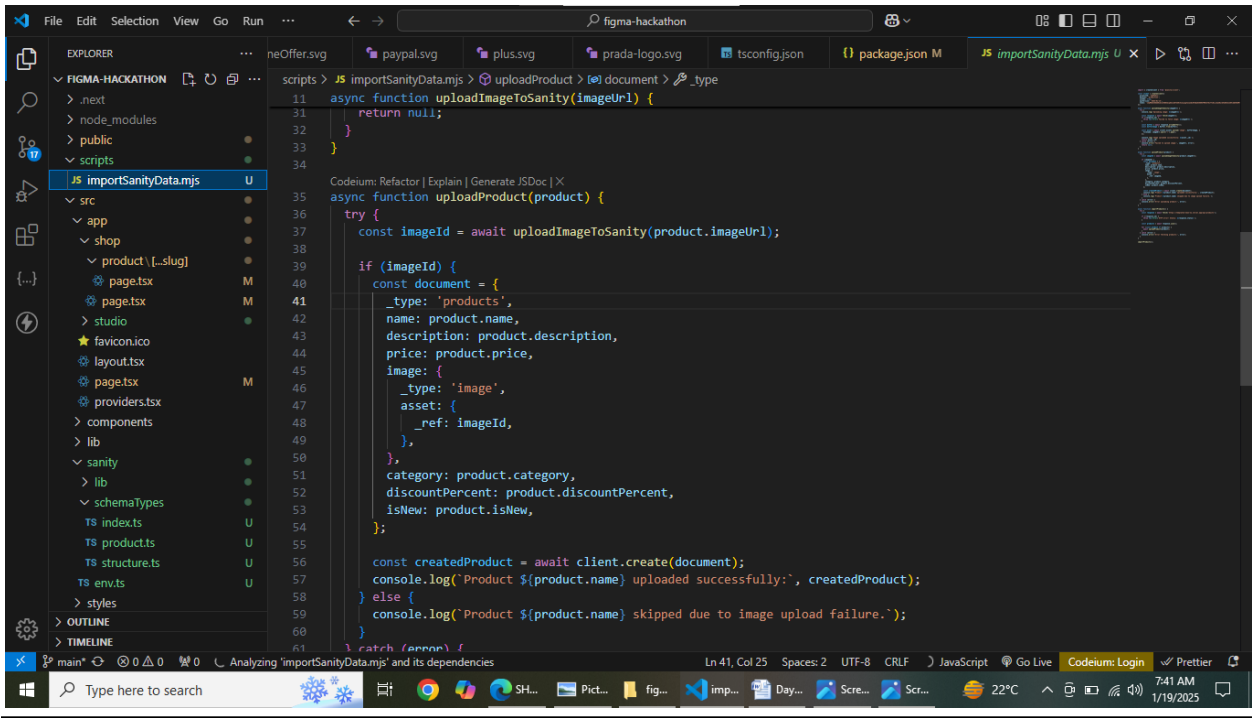

Client Page Code:

Custom Migration Code:

This migration code is responsible for transferring data from the Sanity CMS to the template 1 database. The custom migration script performs the following steps:

Sanity Product Schema:
